PANDA Micro Vertex Detector
→ HK 41.1 T. Stockmanns

Max. Length:

~ 40 cm

Max. Radius:

15 cm

Vertex reconstruction with the PANDA Micro-Vertex-Detector

“4 Pions Scans”: 4 pions ($2 \pi^+$ and $2 \pi^-$) propagated from a common vertex

Momentum: 1 GeV/c $\theta [10^\circ, 140^\circ]$ $\phi [0^\circ, 360^\circ]$

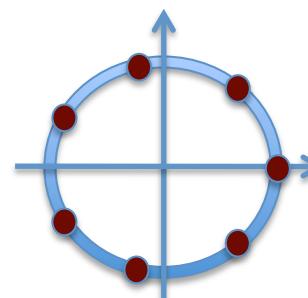

Detectors: MVD, STT, FTS

Moving the common vertex:

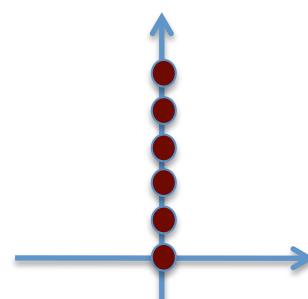

“Z – Scan”

along the z axis in $[-1, +1]$ cm

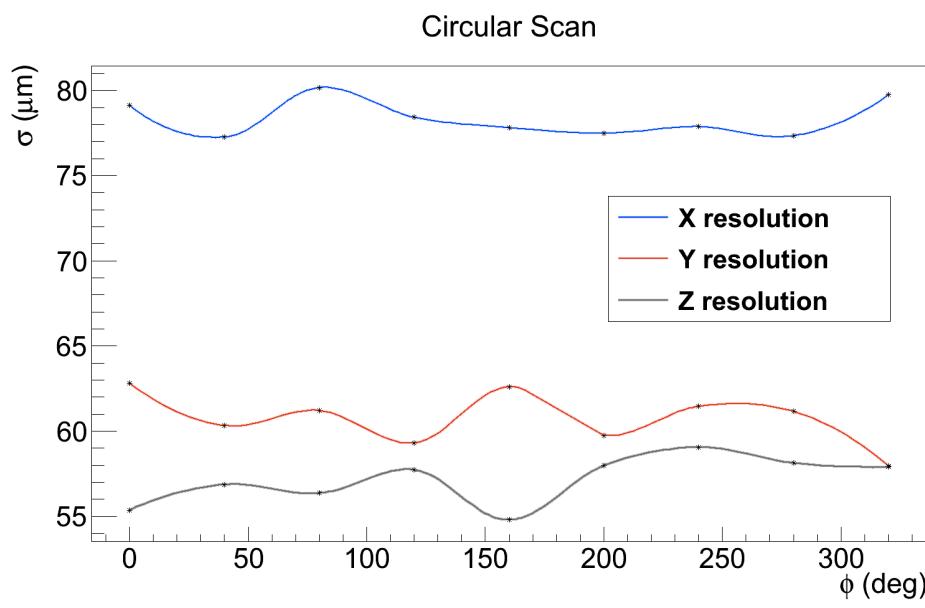

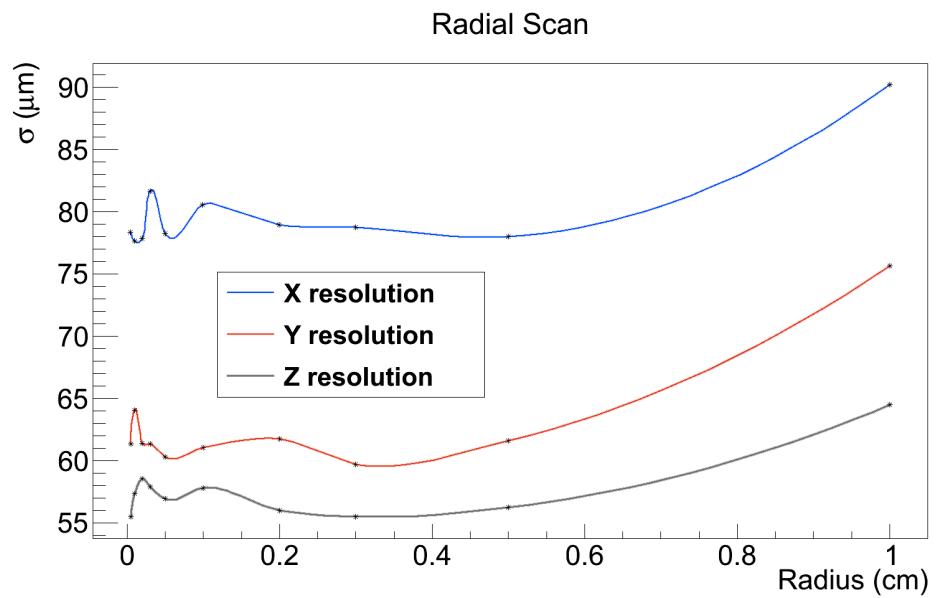

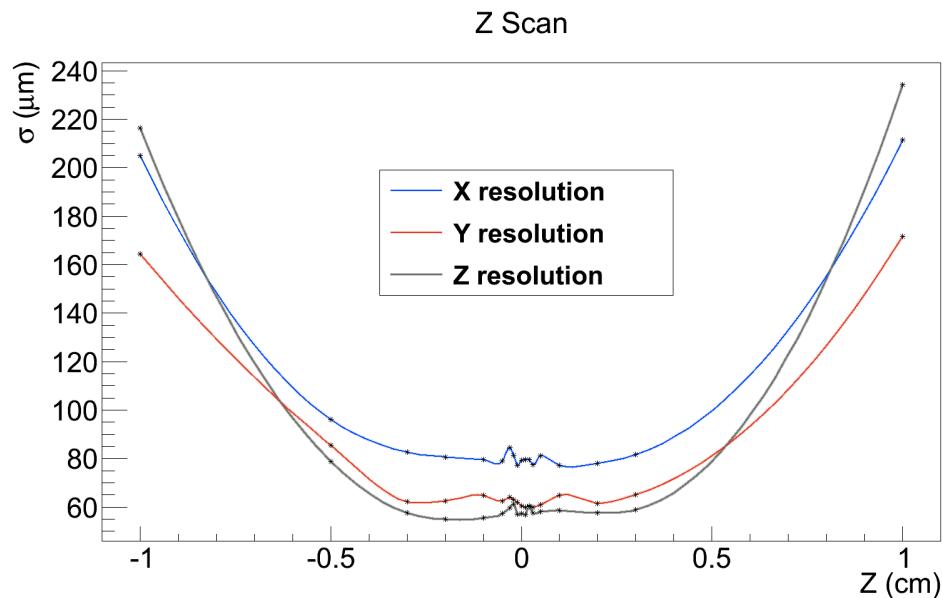

“ φ – Scan”

along a circle of radius 1cm in the transverse x-y plane

“r – Scan”

along a radius laying in the transverse x-y plane

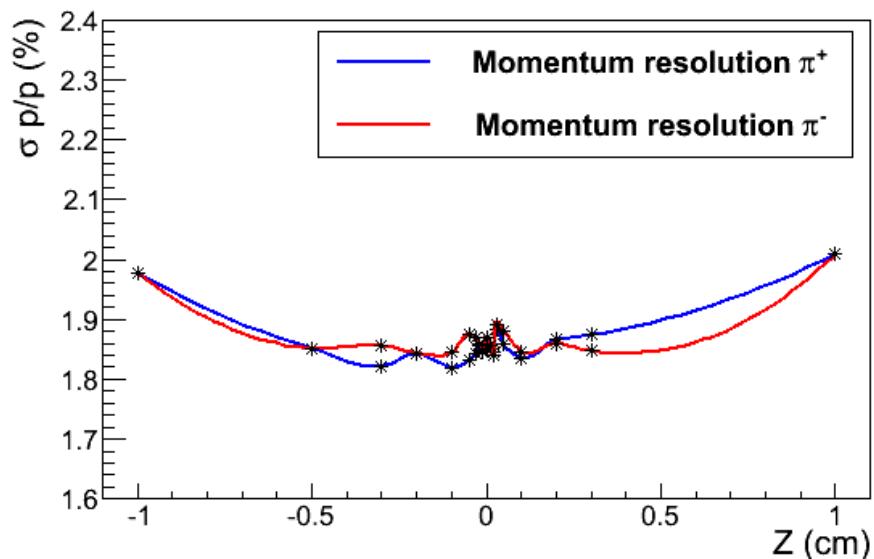

Vertices were determined with a POCA vertex finder:

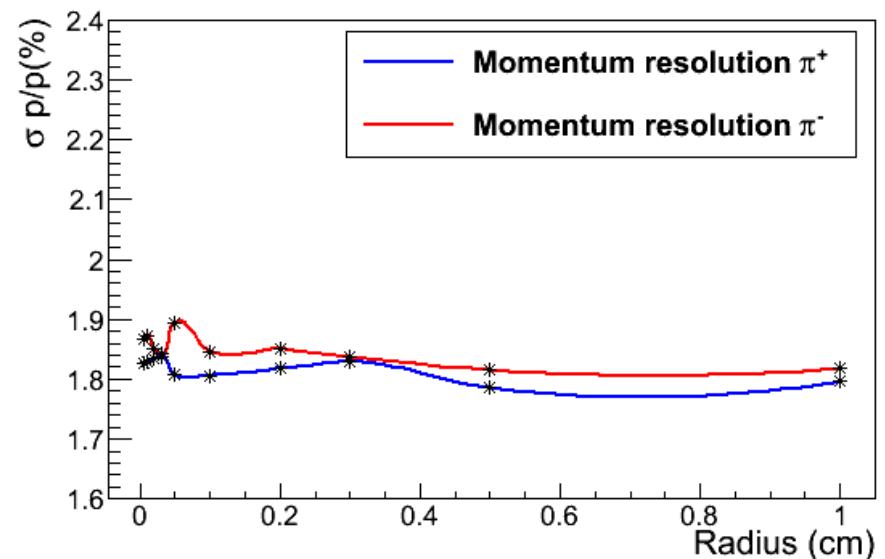

- Helices are projected to the transverse plane
- There the POCA between couples of circles is found
- The 3D POCA is found

The PR used here is efficient for primary vertices → max a few mm far from (0,0,0)

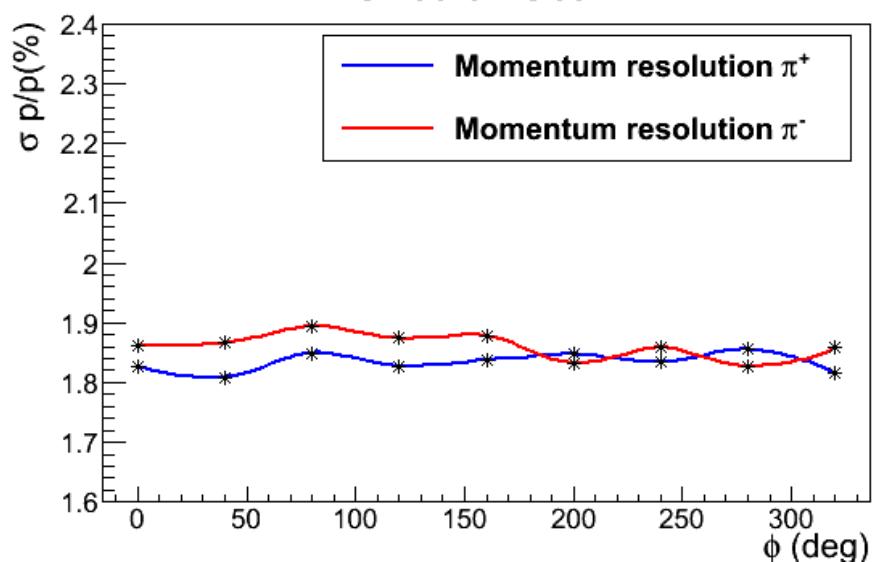

Z Scan

Radial Scan

Circular Scan

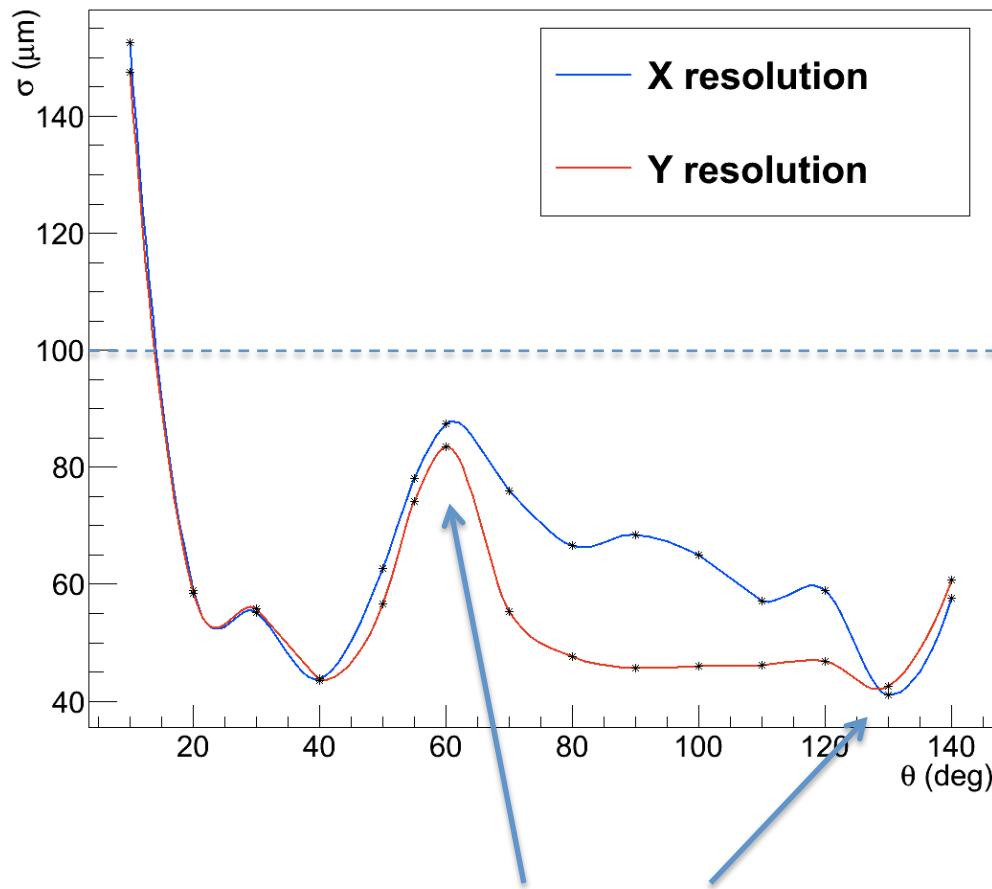

Momentum resolution really stable in all the scans both for π^+ and π^- .

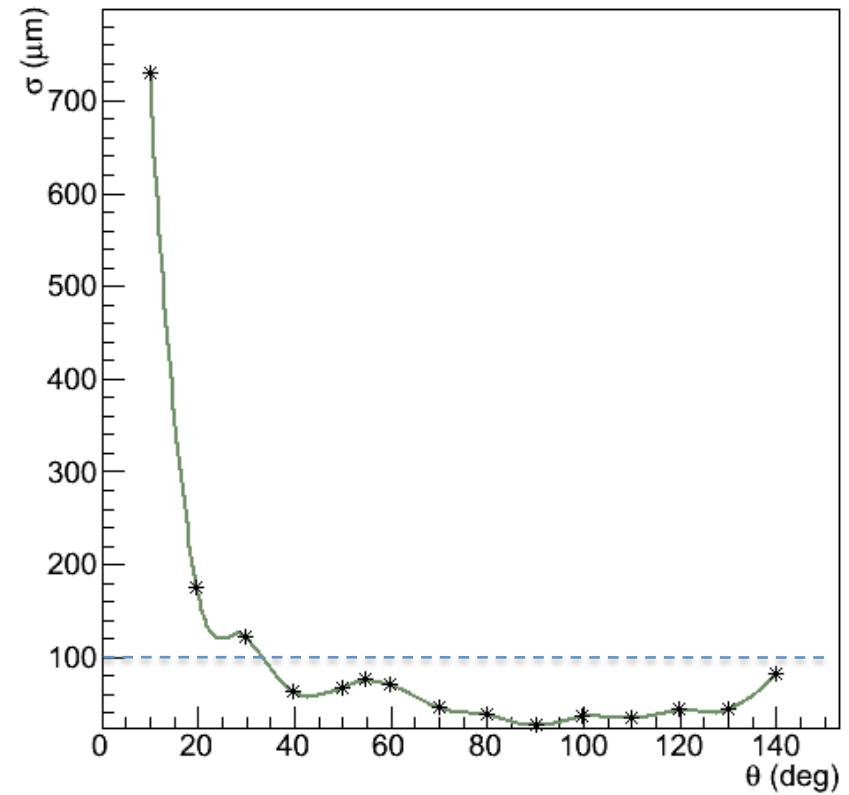

$\sigma p/p$ stays in the range 1.8 - 1.9% during the performed characterization.

X-Y differences

θ Scan

Z resolution

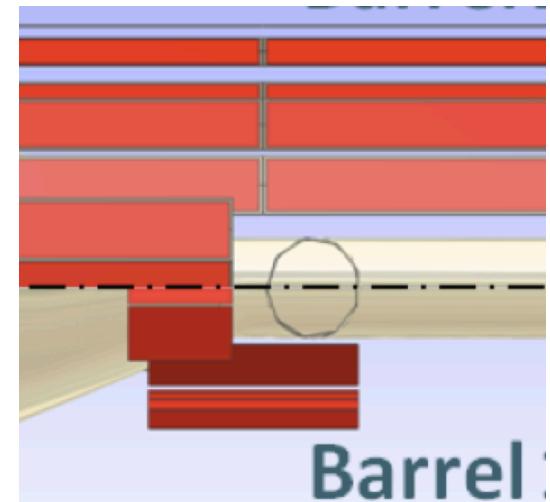

Different x-y performance of
the vertexing in this range

Cross check on a possible bias
introduced by the vertex finder

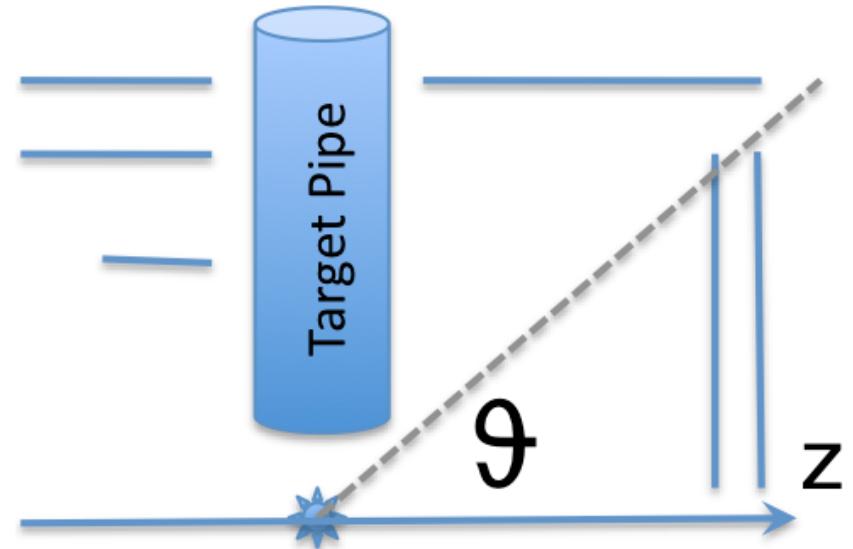

σ (μm)	No Rot	90°
x	88.3	69.4
y	69.4	88.3

Cross check on a possible bias
introduced by the vertex finder

σ (μm)	No Rot	90°
x	88.3	69.4
y	69.4	88.3

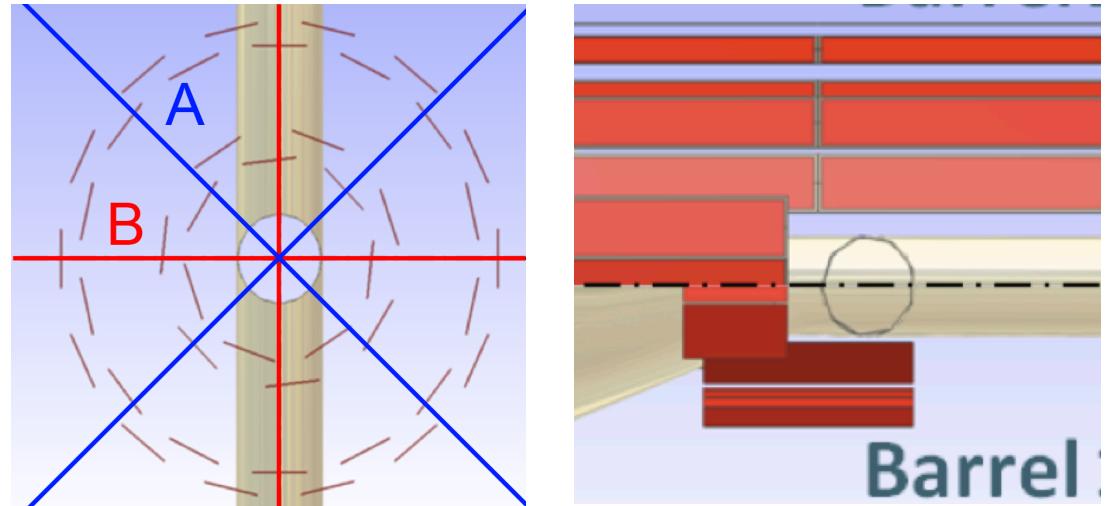

$$\alpha = \tan^{-1}\left(\frac{26.6 \text{ mm}}{14.4 \text{ mm}}\right) = 54^\circ$$

Cross check on a possible bias introduced by the vertex finder

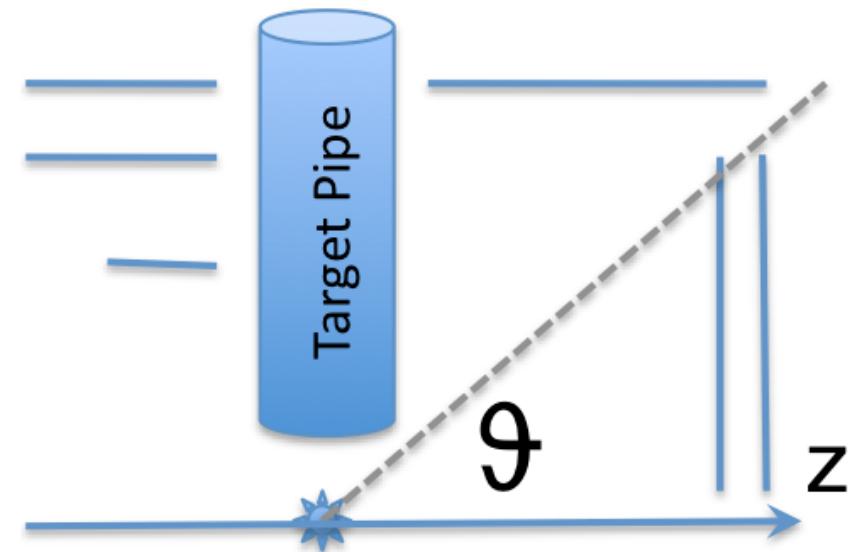

σ (μm)	No Rot	90°
x	88.3	69.4
y	69.4	88.3

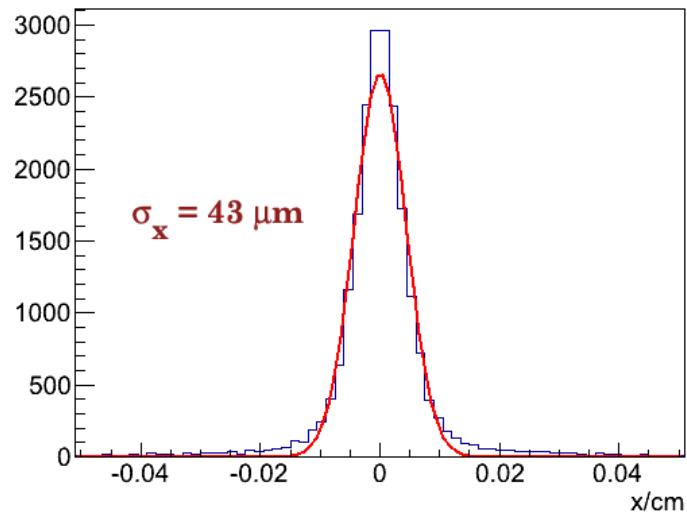

Two different schemes of the initial directions of the four pions.
 θ fixed to 75°

$$\alpha = \tan^{-1}\left(\frac{26.6 \text{ mm}}{14.4 \text{ mm}}\right) = 54^\circ$$

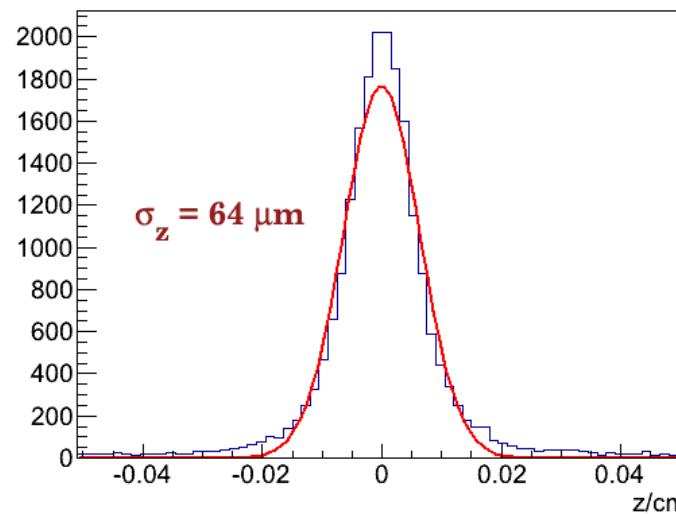

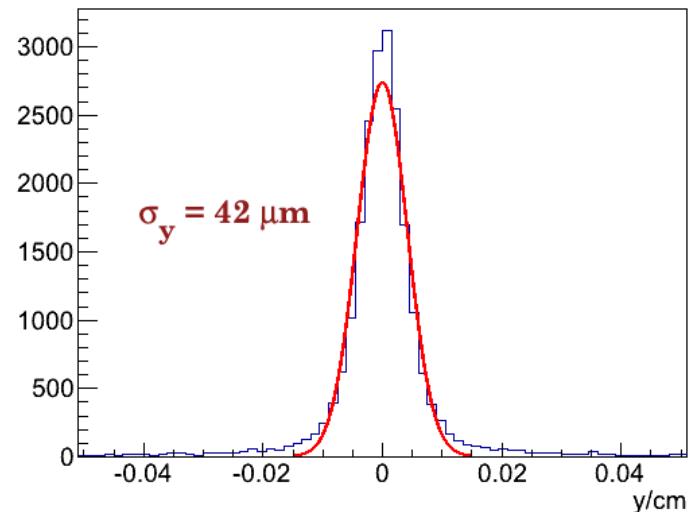

Setup	σ_x (μm)	σ_y (μm)
A cross, no pipes	30	30
A cross, pipes in	33	33
B cross, no pipes	103	29
B cross, pipes in	103	30
All ϕ , pipes in	67	47

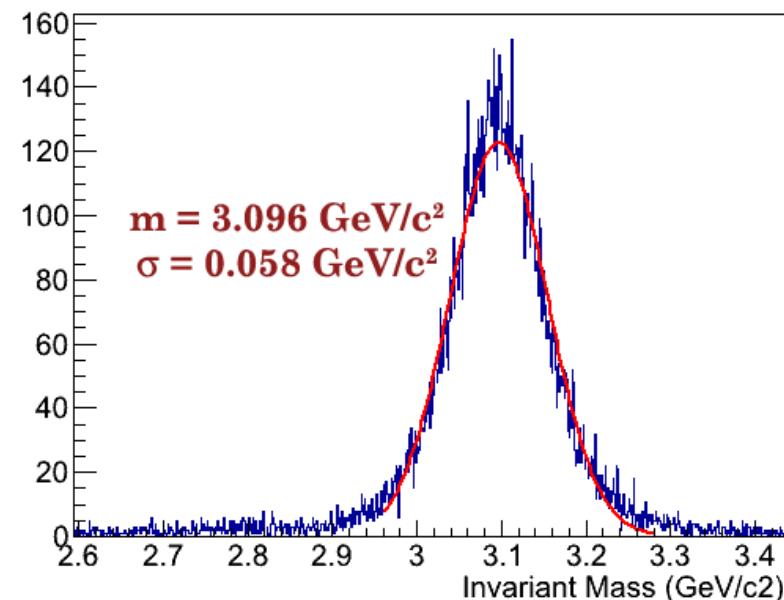

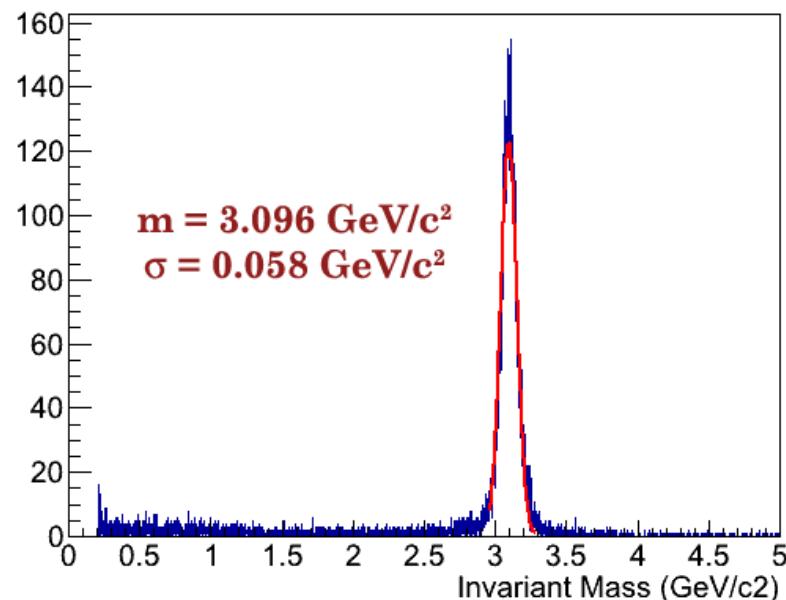

Primary Vertex Reconstruction

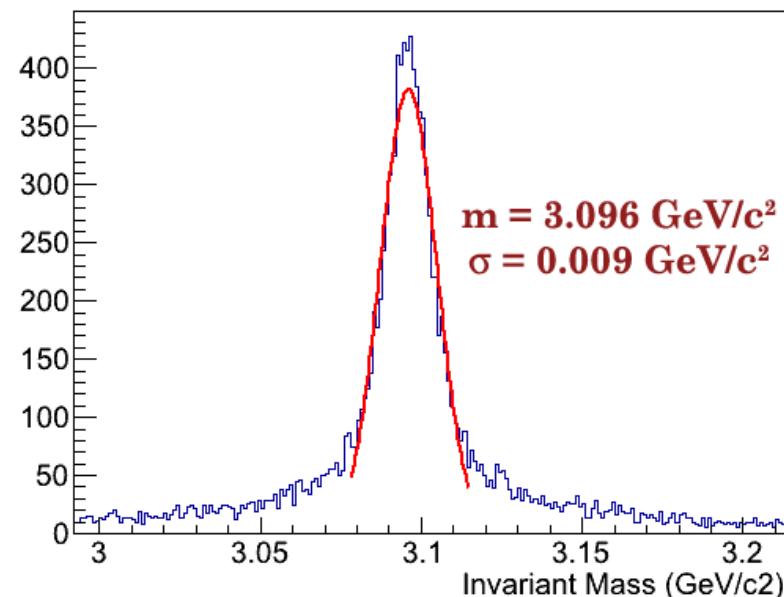

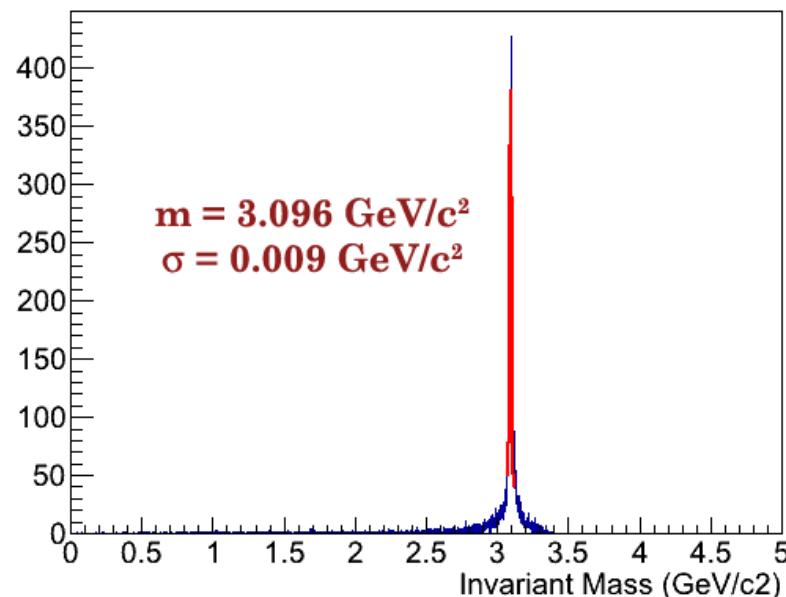

$J/\psi \rightarrow \mu^+ \mu^-$
vertices

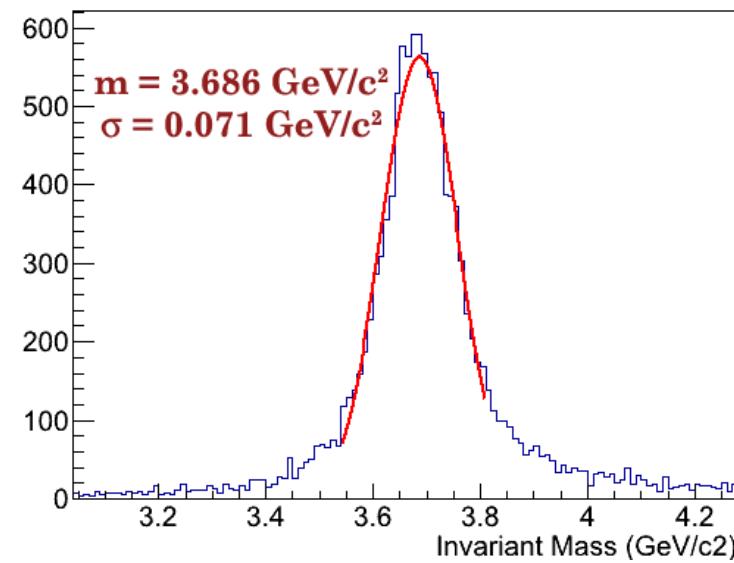

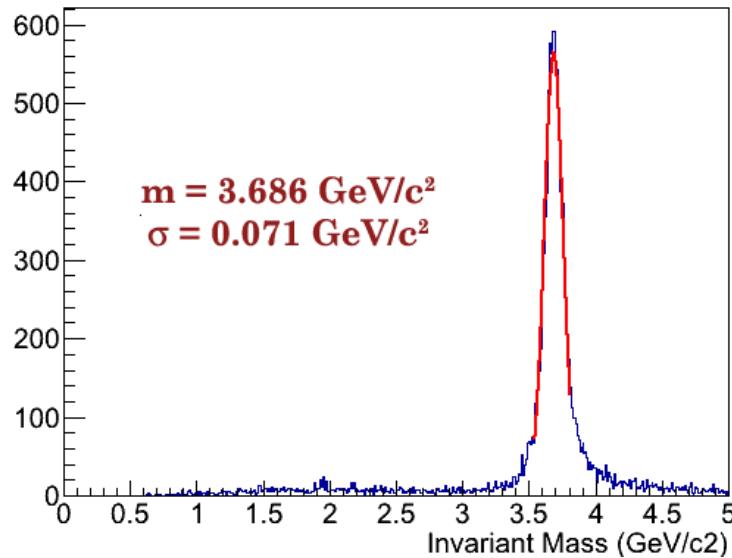

J/ ψ mass

J/ ψ missing mass

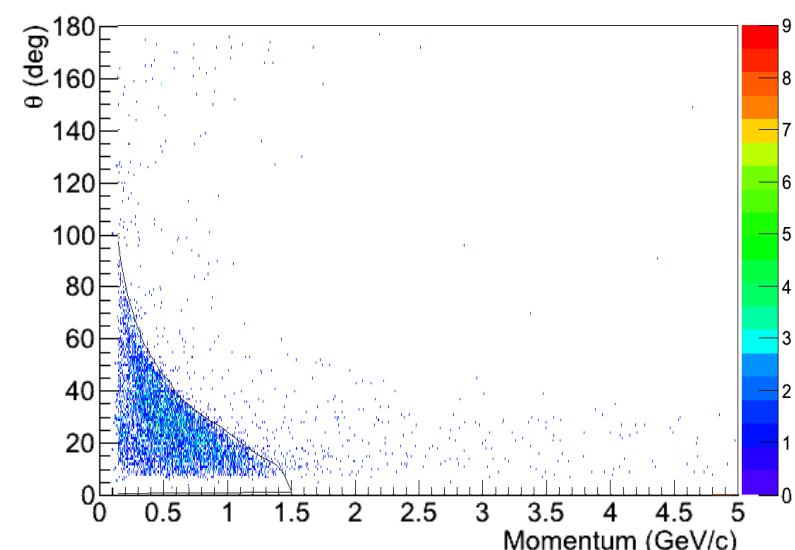

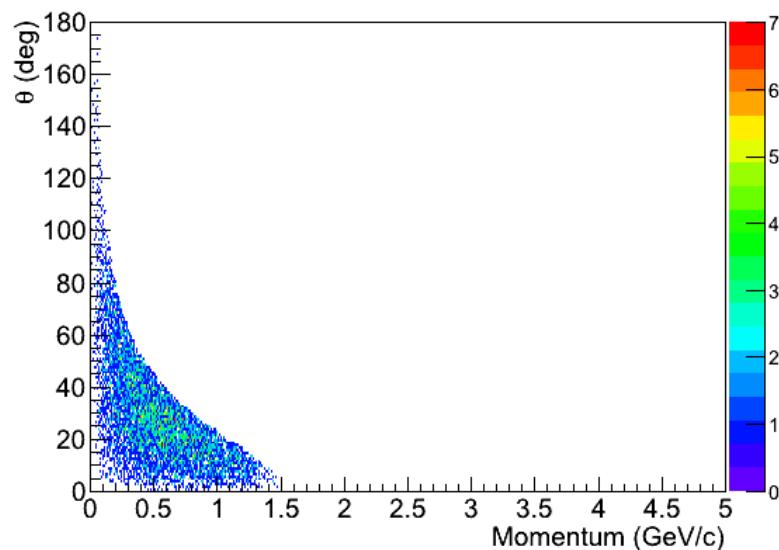

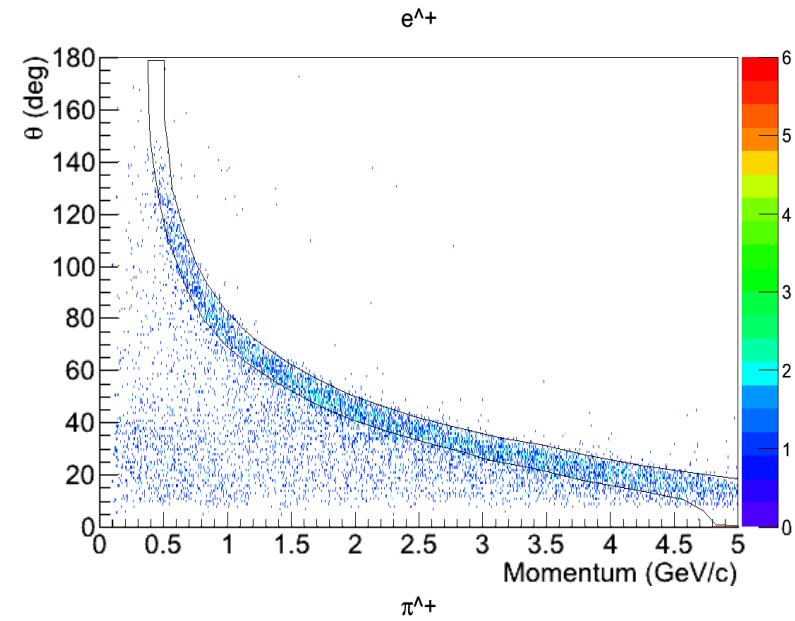

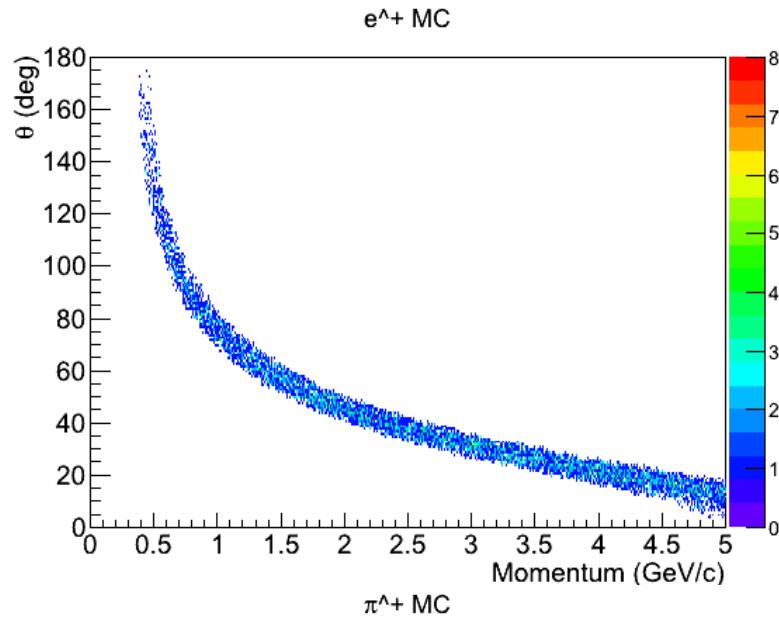

$\psi(2S)$ mass

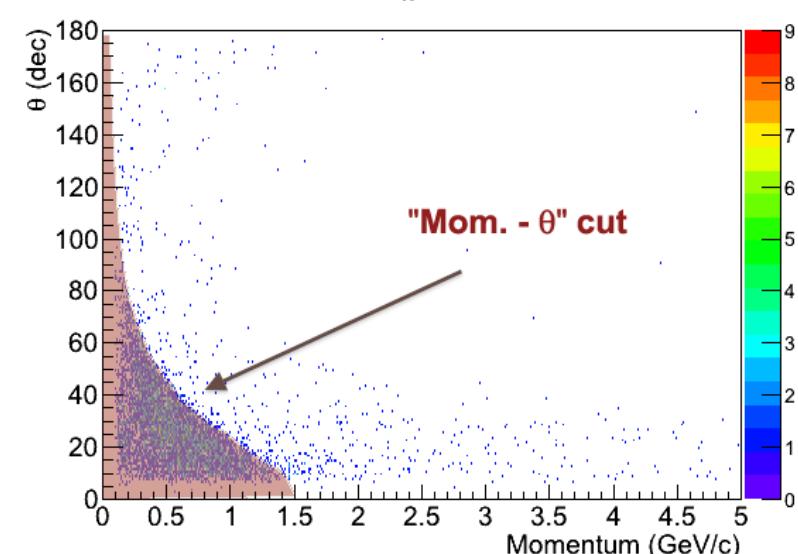

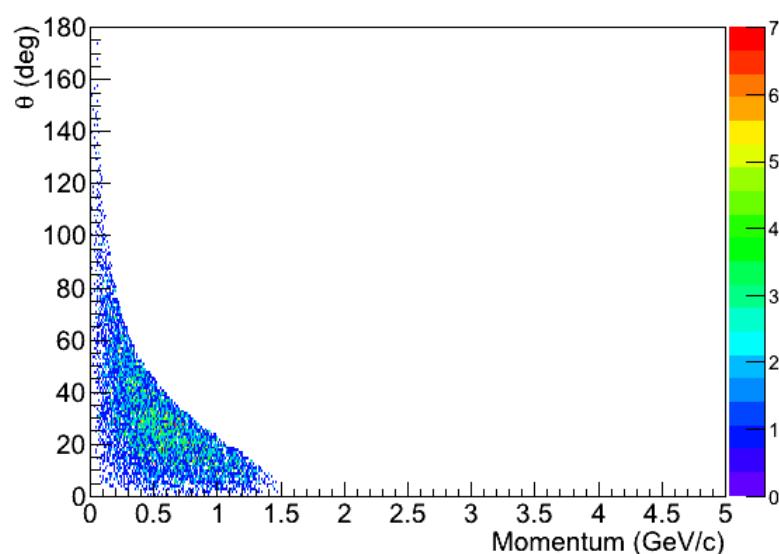

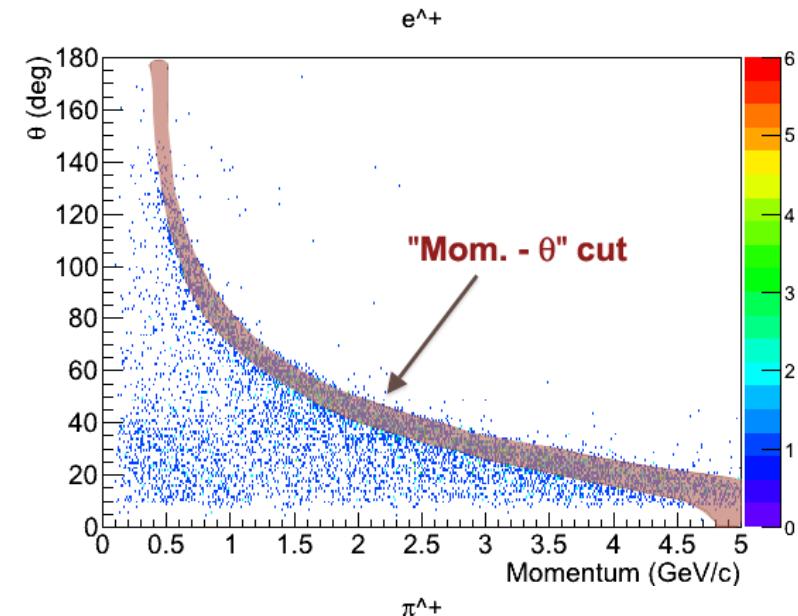

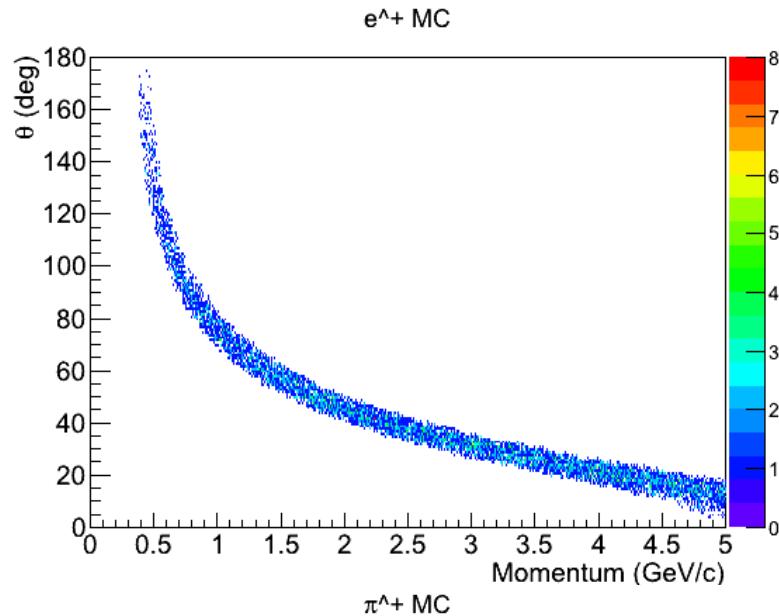

$m_{\psi(2S)} = 3.686 \text{ GeV}/c^2$
PDG:
 $\Gamma_{\psi(2S)} = 304 \text{ keV}/c^2$

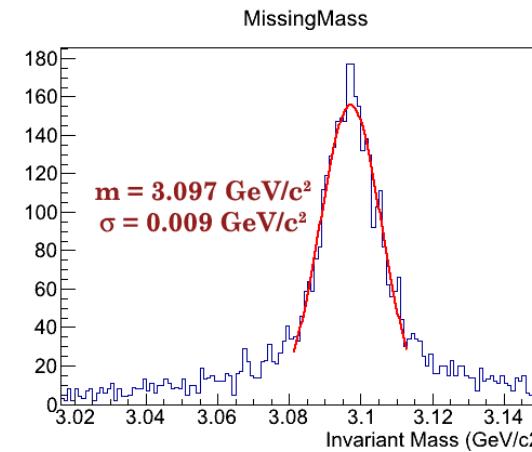

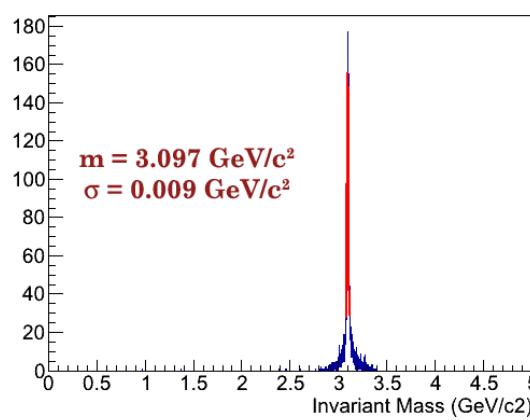

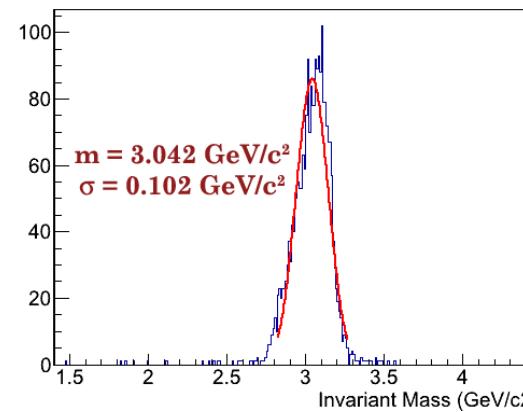

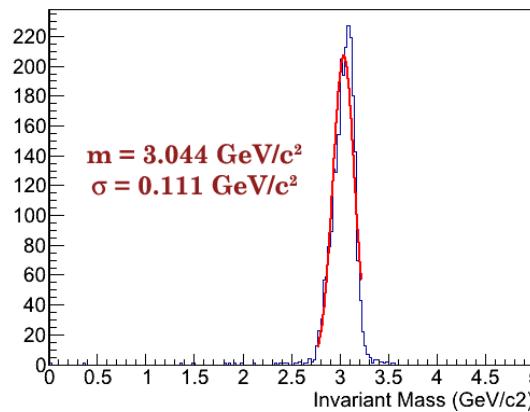

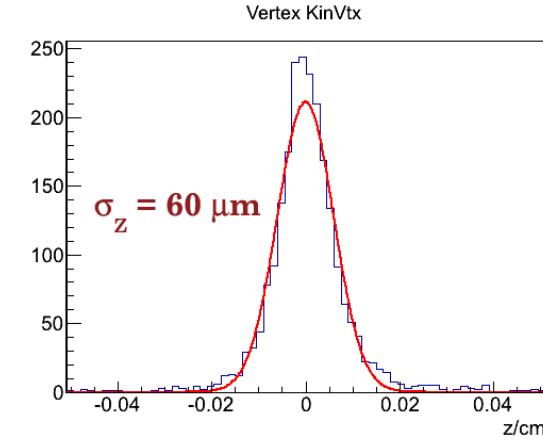

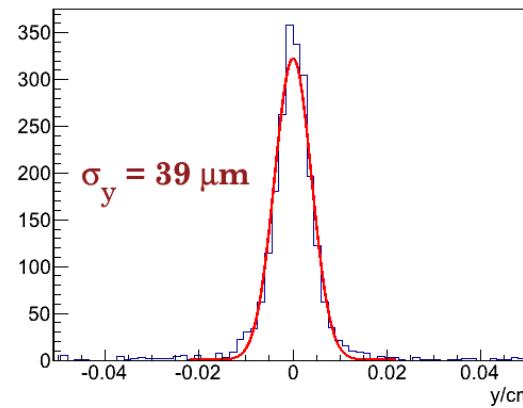

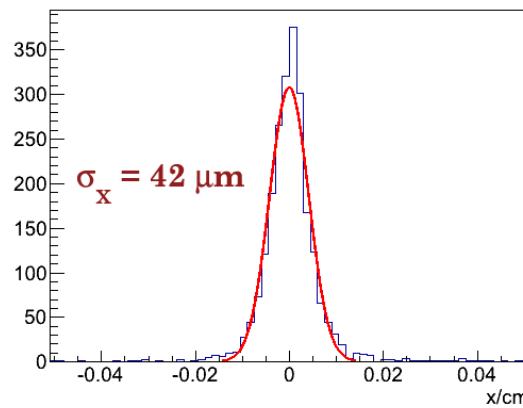

Primary Vertex Reconstruction

$$\bar{p}p \rightarrow \psi(2S) \rightarrow J/\psi \pi^+ \pi^- \rightarrow e^+ e^- \pi^+ \pi^-$$

Primary Vertex Reconstruction

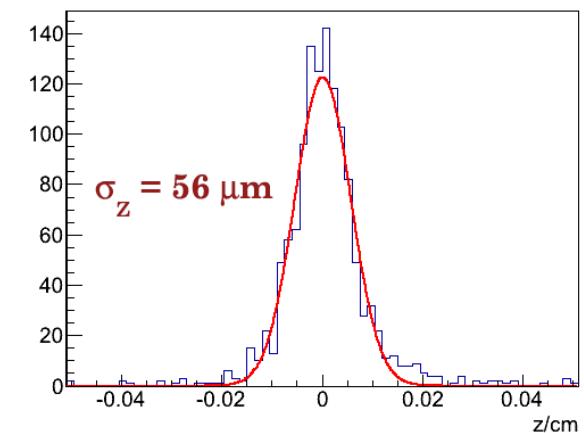

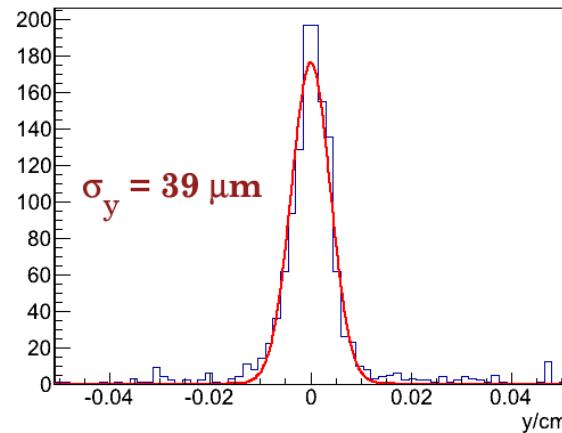

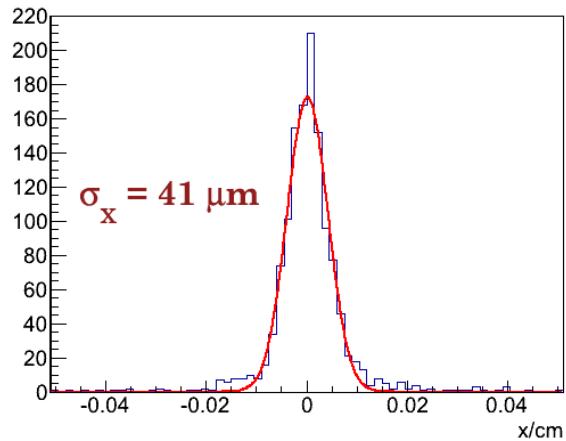

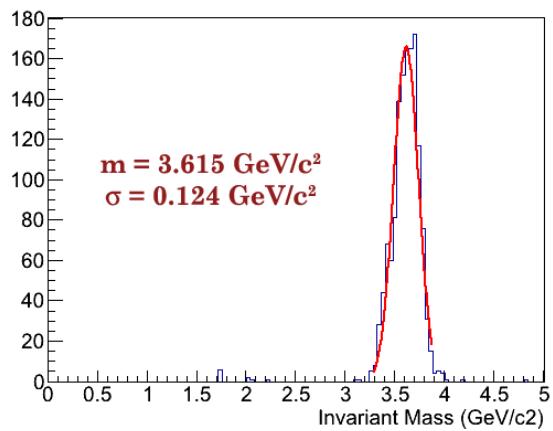

$J/\psi \rightarrow \pi^+ \pi^-$ vertices

J/ψ mass

J/ψ missing mass

$\psi(2S)$ vertices

PDG:

$$m_{\psi(2S)} = 3.686 \text{ GeV}/c^2$$

$$\Gamma_{\psi(2S)} = 304 \text{ keV}/c^2$$
