

SVN repository – ideas and possibilities at GSI

- Only the first time: checkout with
 - *svn checkout svn+ssh://charme@lxg0308.gsi.de/u/charme/svn/pid-tag*
- You find two directories
 - trunk (working directory)
 - tags (holds later named snapshots)
- Work is done in trunk
 - editing files
 - adding files (later do a *svn add filename*)
 - removing files by *svn remove filename*
- at end
 - *svn commit -m “what I have done string”*

- Normal working cycle
 - in directory pid-tag/trunk
 - svn update (get changes from other people)
 - work
 - svn commit (upload changes to repository)
